

## Testimonials and Case Histories

I have always had problems with my gums. But over time they have progressively gotten worse. I would wake up in the morning and have to put an ice pack on my mouth just to get down the swelling to brush my teeth.

So I went to the dentist to see if there was anything I could do to fix the problem. He said that because my gums were so bad, he would have to put me to sleep and “shave” of the part of the gums that was infected. And that it would cost me around \$3,000.00. Well after I picked my jaw up off of the floor, I knew I had to find a better solution. So I came across this new system, the Perio-Defense FMD™ system. I contacted a dentist in my area that provides this system and went in for a consultation. I told him what the other dentist wanted to do. He told me that I wouldn’t have to do anything that invasive. All I needed was a deep cleaning, the Perio-Tek natural treatments and to do my part at home using the Perio-Defense FMD™ Home kit.

Before I started my treatments I had 208 pockets 4 mm and when I was finished I only had 3. And those 3 pockets were from my wisdom teeth coming in. I can’t tell you enough how incredible The Perio-Defense FMD system is. Not only does it work, but also it’s natural so I had no side effects from all those chemicals and anti-biotics use today. Thank you for making a product that really works.

I’m very thankful for the Perio-Defense FMD™ System. I went for years with bleeding gums. My dentist would always do a periodontal check up. I never had any large pockets but I had bleeding gums. It was so bad that if I even touched my face and pressed down on my gums they would bleed. The only thing my dentist would do is to say floss more and use this rubber-ended toothbrush. I did that with no results. I just lived with it. Then I heard of this new natural periodontal treatment, the Perio-Defense FMD™ System. I went to the dentist that offers it in my area. In two months of treatments and using the home kit no more bleeding and the four pockets I had that were 4 mm are now 1 mm. I will be going to my new dentist now, and keeping up with the maintenance program so I will never have that problem again. Thanks Perio-Tek.

### Case Study #1

A 36 -year-old male with first visit measurements of 4mm (25), and 5mm (4). Administered the natural in -office treatment. On most recent visit (21 months from first visit), had five measurements of 4mm.

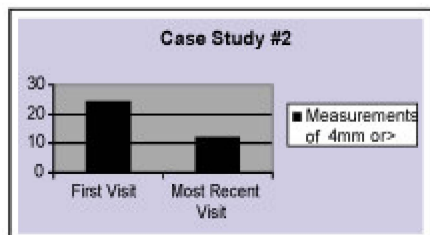

### Case Study #3

A 60-year-old male with first visit measurements of 4mm (20), and 5mm (3). Administered the natural in-office treatment. On most recent visit (12 months from first visit) had zero measurements of 4mm.

### Case Study #2

A 38-year-old male with first visit measurements of 4mm (21), 5mm (2), and 6mm (1). Administered the natural in -office treatment. On most recent visit (over 12 months from first visit) had measurements of 4mm (11), and 5mm (1).

### Case Study #4

A 62-year-old female with first visit measurements of 4mm (23), and 5mm (1). Administered the natural in -office treatment. On most recent visit (12 months from first visit) had two measurements of 4mm.
